EXPERIENCE

ERP Engineer / IT Support (NTNL Construction Pvt. Ltd.)

- Managed end-to-end ERP system operations, user support, and business application functionality.
- Resolved ERP-related technical issues and ensured smooth data management across departments.
- Handled user account management, access permissions, and system configurations.
- Performed system monitoring, troubleshooting, and application support for operational continuity.
- Managed office networking, IT infrastructure, and system administration activities.
- Provided hardware, software, and end-user technical support for organizational systems and devices.
- Ensured smooth maintenance, updates, and overall functionality of enterprise IT environments.

Key Achievement:

- Developed a Labour Attendance App for real-time attendance tracking and process automation.
- Developed a centralized web-based system for all departments, enabling role-based access to data as per user permissions.

June 2025- Present

Zoho & Microsoft 365 (Cloud Application) Administration and User Support

- Administered and maintained organizational environments on Zoho Workplace and Microsoft 365.
- Managed user lifecycle activities including account creation, license assignment, and role-based access control.
- Provided end-to-end technical support for cloud applications including Zoho Mail, Zoho WorkDrive, Microsoft Outlook, SharePoint, and Power Apps.
- Configured and supported tools such as Microsoft Power Apps, Microsoft SharePoint, Zoho WorkDrive, and Zoho Mail.
- Diagnosed and resolved issues related to login, configuration, synchronization, and application performance.
- Supported collaboration and document management systems to ensure seamless communication and data sharing across teams.
- Implemented and monitored data security practices, including access control policies and system reliability measures.
- Assisted employees with day-to-day IT queries, improving productivity and workflow efficiency across departments.

E-Commerce Operations & Product Management

- Hands-on experience working with Three 13 Crafts in managing online sales channels.
- Managed product listings across platforms such as Meesho, Shopify, and Amazon.
- Created and optimized product listings, including titles, descriptions, pricing, and images.
- Handled catalog management, product updates, and inventory coordination.
- Ensured accurate product information and improved listing quality for better visibility and sales performance.
- Coordinated with internal teams for product data, images, and order-related updates.

Projects

Labour Attendance App

- Developed a real-time labour attendance application to record and monitor daily workforce attendance.
- Automated attendance calculations, reducing manual effort and minimizing errors.
- Generated accurate reports for payroll processing and management review.
- Improved operational efficiency through centralized data management.

Departmental Web System

- Designed and developed a secure role-based web portal for multiple departments.
- Implemented user authentication and access control based on departmental roles.
- Centralized departmental information, documents, and internal workflows.
- Enhanced communication and streamlined administrative processes.

Alumni Management System

- Built a centralized platform for alumni registration, profile management, and communication.
- Enabled alumni to update personal and professional information online.
- Facilitated efficient communication between the institution and alumni network.
- Improved data organization and long-term engagement tracking.

Functional Expertise & Technical Enablement (HR & Procurement)

HR Systems Support

- Strong understanding of HR processes and workflows.
- Provided technical assistance to the HR team for system usage, data handling, and process digitization.
- Supported user management, data updates, and smooth execution of HR-related operations.

Procurement Systems & Vendor Integration

- Good working knowledge of Purchase/Procurement processes.
- Integrated procurement activities with L&T SuFin for efficient vendor management.
- Managed supplier interactions by floating RFQs and collecting quotations for multiple items.
- Streamlined digital procurement workflows, improving sourcing efficiency and vendor coordination.

Career Objective

- To leverage 1.5 years of experience in ERP and IT Support, Windows Administration, and enterprise collaboration platforms to support business-critical applications and IT infrastructure.
- To strengthen technical expertise in system administration, database management, virtualization, and automation.
- Interested in building a career in SAP Basis Administration, with a focus on system installation, configuration, monitoring, performance optimization, security administration, backup and recovery, user and role management, access control, and troubleshooting.
- To contribute to the stability, security, and continuous improvement of enterprise systems and business applications.
- To deliver reliable and scalable IT solutions that enhance operational efficiency and support organizational growth.
